

# C Programming Guide

Advanced Level

## Table of Contents

- [Introduction to C Language](#)
- [Advanced Pointers](#)
- [Dynamic Memory Management](#)
- [Data Structures in C](#)
- [Advanced File Handling](#)
- [Concurrency in C](#)
- [Network Programming](#)
- [Debugging and Optimization](#)
- [Advanced Projects](#)
- [Resources](#)

## 1. Introduction to C Language

- History and origin
- Features and uses of C
- Where C is used (OS, embedded, compilers, etc.)

## 2. Advanced Pointers

- Pointer to Pointer
- Function Pointers
- Pointer Casting

## 3. Dynamic Memory Management

- Advanced Memory Allocation Techniques
- Detecting and Preventing Memory Leaks

## 4. Data Structures in C

- Linked Lists
- Trees
- Hash Tables

## 5. Advanced File Handling

- Working with Binary Files
- File Locking Mechanisms

## 6. Concurrency in C

- Using Threads
- Synchronization Techniques

## 7. Network Programming

- Socket Programming
- Client-Server Model

## 8. Debugging and Optimization

- Using Debugging Tools
- Code Optimization Techniques

## 9. Advanced Projects

- Simple Compiler Design
- Basic OS Development

## 10. Resources

- Books: “Advanced Programming in the UNIX Environment”, “C Interfaces and Implementations”
- Online: StackOverflow, Cprogramming.com, Linux Journal
- GitHub links (advanced projects and libraries)
